INTERLOCKS

SAFETY BY DESIGN

ALCATRAZ[®]

INTERLOCKS BV

SAFETY BY DESIGN

A PATENTED SYSTEM TO PREVENT ACCIDENTS

Alcatraz designs and manufactures interlock systems that safeguard critical installations. Each system is based on our **patented** key and lock design, which eliminates the chance of human error.

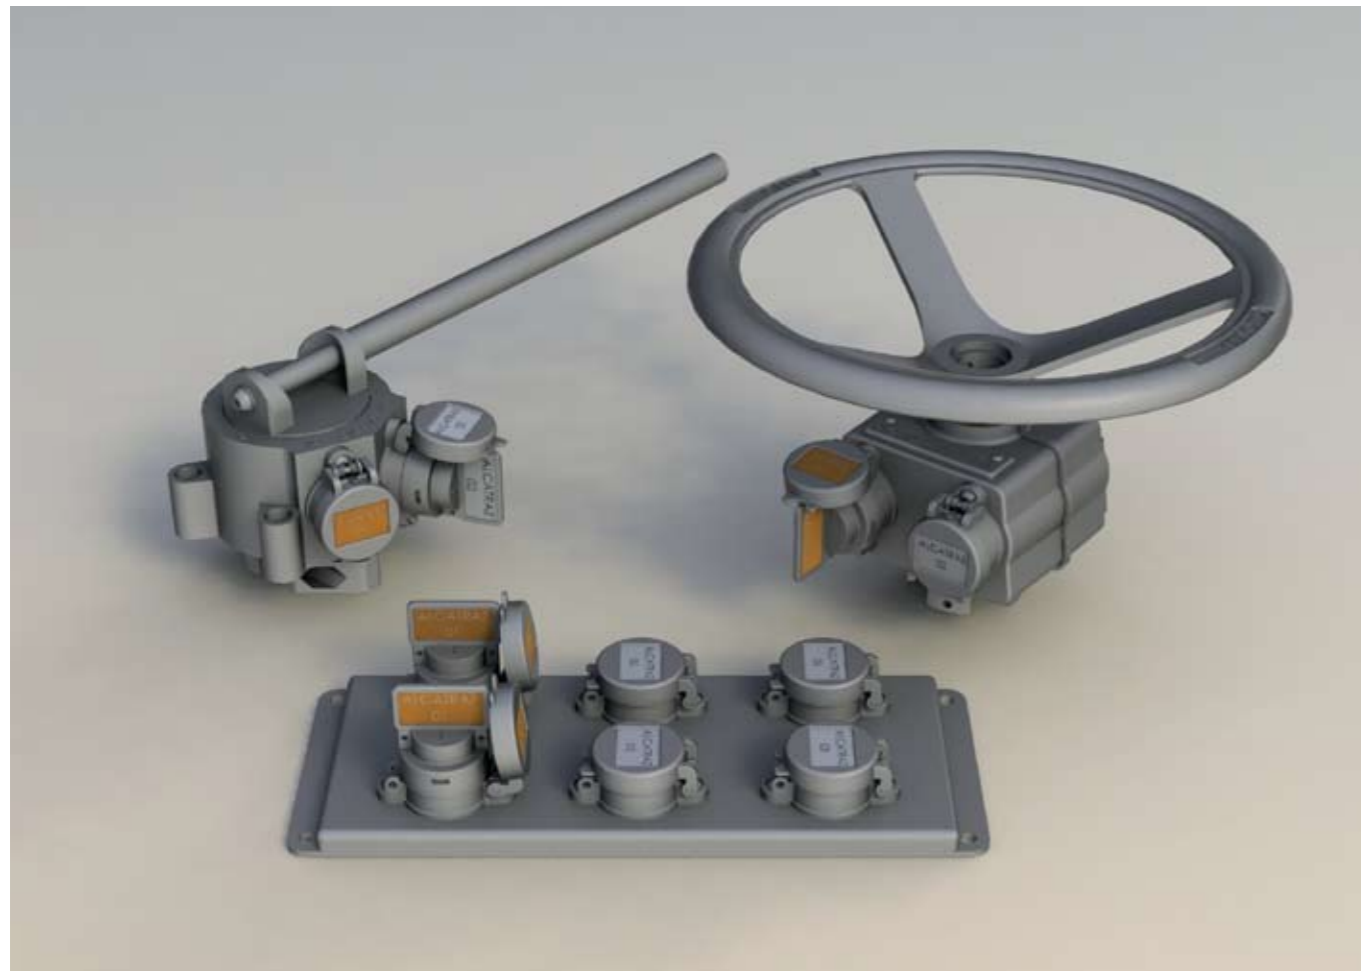

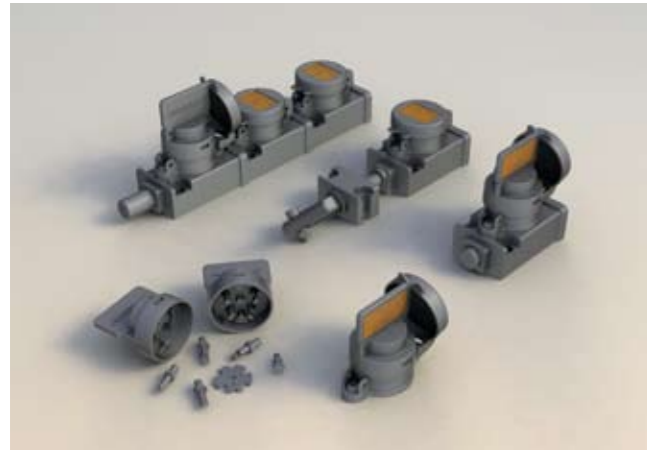

With an Alcatraz Interlock System, the operator must follow a predetermined sequence by means of a mechanical coded key transfer. Our system can safeguard even the most complex operating sequences.

Alcatraz has successfully deployed systems in the oil & gas, chemical and offshore industries.

ALCATRAZ PRODUCTS

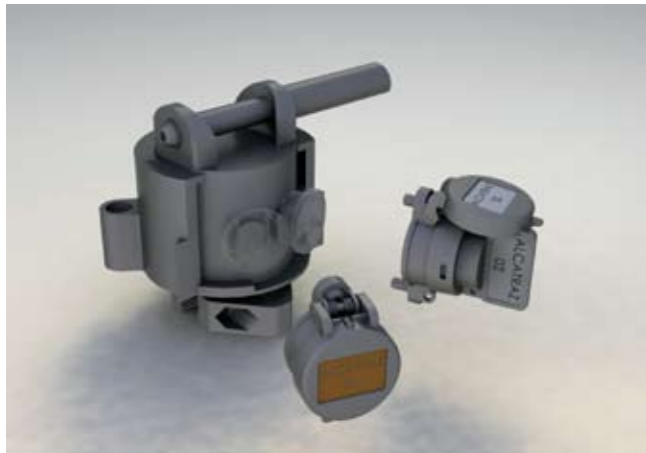

- Integral quarter-turn valve locks
- Integral multi-turn valve locks
- Bolt locks
- Door locks
- Pig closure door locks
- Locks for MOV valves
- Locks for pneumatic valves
- Sequence control boxes
- Key exchange boxes
- Time delay boxes
- Locks for rotary switches
- Switch gear locks
- Railway locks
- Locks for loading arms and stairs
- Key storage cabinets

SOME APPLICATIONS

- Pig traps
- PSV safety relief systems
- Storage tanks
- Inert gas systems
- CO2 deluge systems
- Sampling devices
- Ethylene furnaces
- Boiler bottom blow down systems
- Mixers and separators
- Dryers and centrifuges
- Granulators and filters
- Electro static precipitators
- Loading stations

QUALITY PRODUCTS AND SERVICES

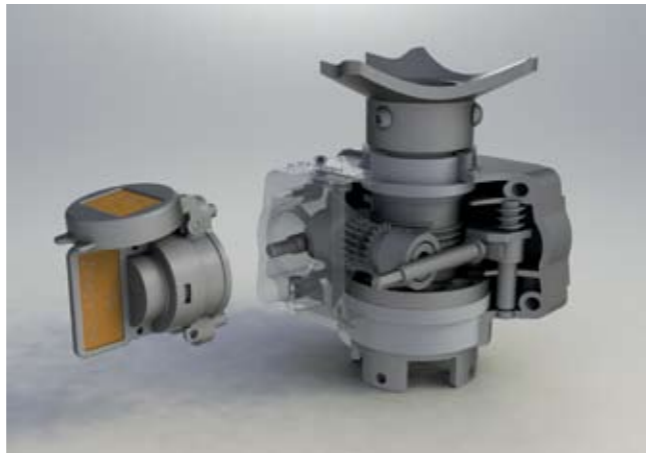

Alcatraz Interlocks are an effective safety management tool. Our services meet the highest quality and process standards. Alcatraz products are built according to ISO 9001 standards, TÜV approved and come with a declaration of conformity (CE).

Alcatraz has an intimate knowledge of what works in your industry. Our engineers have designed products and applications to address many of the problems you currently face.

SOLID CONSTRUCTION - EASE OF USE

Alcatraz locks are at the heart of each interlocking system. Each lock and key is stainless steel 316 and electro polished. The locks have a solid construction with a minimum of moving parts.

The locks have an automatic closing protection cap to prevent sand and dust from

entering the locking mechanism. They are also resistant to fire and extreme cold.

Alcatraz locks are easy to operate – even with gloves. The operator can always see what he's doing. No instructions are necessary. The locks are maintenance free, no grease is ever required.

HOW CAN WE HELP YOU?

Since 1993, Alcatraz has helped clients safeguard hundreds of complex installations. We would like to help you.

Tell us about your safety issues and technical requirements. We will analyze your situation and design an interlock system to fit your needs. One that is safe, easy to implement and within your budget.

Alcatraz can train your operators on site, measure and install your system. We can also advise on operating sequences or do a periodic maintenance check up.
