an **ACTEON** company

ChainCo offers a chain inspection service for all chain grades and sizes, under all classifications. This service is worldwide and covers a specialist area, including semi-submersible rigs, floating production, storage and offload units, and vessel and offshore installations.

ChainCo is accredited as a service supplier for the survey examination of mooring chain for mobile offshore units in accordance with a DNV approved programme that enables the company to work independently under DNV rules.

Photogrammetric Systems

ChainCo also offers a unique service for permanently moored systems and floating storage, production and offtake facilities. A 3D photogrammetric system enables precise measurement of chains to be made while on location.

Chain Inspection Units

Inspection and repair units enable chain studs to be pressed and MPI inspected. This enables repaired and certified chain to be re-installed instead of a costly replacement.

With these units comes an environmentally friendly cleaning system using HP and UHP water jets.

Mobile Stud Press Unit

ChainCo operate the world's first and only Mobile Stud Press Unit. Ideal for deck work on vessels, this new portable unit can be easily sent to any location in the world and is the only unit in the world that can press studs for chains larger than 92mm.

ChainCo specialises in the inspection and certification of mooring chain and the repair or upgrade of heavy-duty mooring systems and components. Purpose built, mobile chain-inspection units can be quickly deployed to any given location.
